

# National take-back service

When Government or corporate customers dispose of their obsolete ICT equipment that's capable of being refurbished and remarketed, they can choose to purchase a 'green initiative sticker' from ACT Logistics. When a product reaches its final phase of its life, the product can be recycled in the correct environmental manner due to the information on the sticker.

Customers can purchase this service for any product they dispose of that is capable of being refurbished and remarketed.

## THE PROCESS

ACT Logistics places a sticker (with our name, logo, phone number and detailed information) on the refurbished product so the final owner can call ACT Logistics to enable free collection and disposal when they no longer want the equipment.

## TRADE-UP SERVICE

In addition to this program, our retail outlet offers 'Trade-up' programs for the retail market.

This is an extremely successful program as we pay the customer for their old equipment (irrelevant of the age / condition / specification) when they trade-up to a newer machine. Where possible, the obsolete equipment is refurbished as a complete unit or individual components. Alternatively, should the equipment require physical destruction and recycling, ACT Logistics manages this process free of charge.
